TECHNICAL FEATURES

Metalsilk is a stylish and modern collection realized with a unique technique that involve two phases: a nonwoven surface laminated with a silky fabric is nextly laser engraved to bring out and impressive luminescent effect between shiny designs and an opaque background. The final result is extremely original and refined; according with the different reflexion of the light the product change in a spectacular play of light and dark that will make alive the wall of your ambiances. We suggest to use a front light to underline this effect that makes it seems the product a perfect fusion of metals with silk.

A final touch of refinement is given by the particularity of the designs, inspired from different elements such as the sound wave, oxidation of metals, casting paint; tracing an industrial style in a more elegant key.
